The Hyacinth is one of the most beautiful, as well as the most fragrant of the Winter and early Spring-flowering hardy bulbs. For house culture in the Winter there is nothing in cultivation more beautiful, and for the garden in early Spring they deservedly stand foremost in the list of all Spring-flowering bulbs. Hyacinths should be planted 6 to 10 inches apart. They are also adapted for growing in pots or water in the house.

From a long list of named Hyacinths we have selected the following 14 varieties on account of their free-blooming qualities, perfect form and distinct colorings.

SPECIAL HYACINTH OFFER
One each of the above 14 named Single-Flowering Hyacinths, every one correctly labeled, for only $3.00, postpaid.

Complete cultural directions for the growing of all bulbs listed in this Catalog will be found in our Bulb Culture, which will be sent free, with every order.

Narcissus are indispensable for Winter use and early Spring flowering. They are perfectly hardy (except Polyanthus), growing and doing well in almost any position, whether in sun or shade, moist or dry. For best effects they should be planted in clumps 6 to 12 inches apart in the hardy borders among the grass, under trees, etc. For blooming in the house during the Winter, all varieties are well adapted, filling the room with their rich fragrance. They are very desirable as cut flowers and will remain perfect in water for days after being cut. In describing Narcissus we have referred to perianth and trumpet, giving the color of each. The trumpet is the center, funnel-like tube and the perianth is the row of petals or wings surrounding it. Our “Bulb Culture” will be sent with every order giving directions for growing all bulbs offered in this and our regular seed book.

ONION SEEDS

Sow in a well-prepared seed bed in August, September or October, and when the plants are of the size of a goose quill transplant 4 inches apart in 12-inch rows, trimming the tops and roots. Don’t fail to transplant, it is not unusual to double the yield by transplanting. A packet will sow about 50 feet of drill, an ounce about 300 feet, 4 to 5 bushels per acre. Marking in 60 to 90 days.

TO RAISE EARLY GREEN ONIONS. In the north seed sown in July to September will usually produce fair size plants, that if given a little protection will survive the Winter and produce small green Onions, earlier than from sets. Silver Skin or White Portugal is the best variety for this purpose.
